KEYPOINTS

Heritage building
Securing the site.
Management and execution of the reconstruction work.
Green building site.

The historic monument of Notre-Dame de Paris is being rebuilt exactly as it was when it was partially destroyed by fire in 2019. Located in the heart of historic Paris on the Île de la Cité, this large-scale project represents a major challenge for the teams in charge of restoration.

The agency is a member of the project management team headed by Philippe Villeneuve, chief architect of historic monuments, who is responsible for research, specifications and architectural decisions. Patriarche, for its part, manages the organisation and logistics of the site.

To this end, the agency is coordinating the contractors on the site and designing very specific facilities for this operation: the creation of a base with 330 bungalows, including changing rooms and sanitary facilities, a canteen, a boiler room, an infirmary, etc. It's a real village that comes to life and requires daily maintenance.

On an exceptional scale, this is a constantly evolving site that also requires efficient management of its facilities through the deployment of shared resources. Lifting solutions, unloading and storage of materials, routing of water and electricity, and lighting for each workstation - our aim is to guarantee pleasant and safe working conditions for everyone involved.

Project management

An exceptional construction site

The scale and complexity of the project meant that a number of related issues had to be addressed, requiring a major commitment to the day-to-day management, organisation and logistics of this large-scale project.

Our teams, with their complementary and multidisciplinary skills, were involved from the design stage onwards from the very specific site installations to securing the monument and then proceeding to its reconstruction.

Patriarche's strength lies in its agile team with a wide range of complementary skills, to ensure the smooth running, organisation and logistics of this exceptional project.
