

# Notre-Dame de Paris

## Management of the restoration and conservation works of Notre-Dame Cathedral in Paris.

### CLIENT

Public body in charge of the conservation and restoration of Notre-Dame de Paris (EPRNDP)

### TEAM

Patriarche Group:  
Patriarche (works management)  
Partners: Philippe Villeneuve, Rémi Fromont, Pascal Prunet, Camebat, Antea, Bestrema, and SI Prev

### KEYPOINTS

Heritage building  
Securing the site.  
Management and execution of the reconstruction work.  
Green building site.

Patriarche joined the contracting authority, headed by chief architect of historic monuments Philippe Villeneuve, in order to oversee and assist with the works management.

While Philippe Villeneuve is in charge of the research, specifications and making decisions about the architecture, Patriarche manages the organisation and logistics of the construction site so as to restore the building to its original state. The firm thus manages the companies selected for the site and the particular facilities and equipment required for the operation of the site (living quarters for the workers, solving plumbing and electrical supply problems, and so on).

Working regularly on refurbishment projects, the firm possesses true expertise in hazard management, for example, transporting materials or crane by barge because the Arcole bridge is too weak to allow overloaded lorries to cross it, and coordinating the work of various trades called on to help.

Having made the monument secure, the firm is supervising the management of works on site.

Typology	Construction cost	Status
Heritage and restoration	Not applicable	Under construction
Surface area	Location	Allocation mode
Not applicable	Paris, France	Project management
