Construction

KEYPOINTS

Wood construction.
Traditional and contemporary architecture.
Exterior design.

AWARDS

Prix d'excellence de l'Ordre des Architectes du Québec.
Prix d'excellence CECOBOIS.
Mérite d'architecture de la Ville de Québec (Community – New Build category winner).
Grands Prix du Design - Projet «OR».

The architectural design of the new building is simple, almost vernacular, but fundamentally contemporary. In addition to establishing a strong identity, it aims to enhance this outstanding natural site located at the heart of urban life.

The Quebec City's plan for the new pavilion is centred around four buildings, housing the administrative, public, sanitation, and storage facilities. Dividing up the building on one level allowed for better control of access to the building, according to use, whether by the public or by the building's employees. The facade setbacks create gaps between the buildings, allowing for the creation of usable and sheltered outdoor spaces.

Open to the general public, it was essential that the proposed materials were durable and easy to maintain in order to extend the useful life of the building and minimise operating costs.

In the end, we worked very hard with the engineers to design a highly energy-efficient building.

Typology
Sport and culture

Surface area
2,288 m² of floorspace

Construction cost
6.8 M\$CAD

Location
Sainte-Foy, Canada

Status
Delivered 2019

Allocation mode
Private project management
