

Trois-Rivières Terminal

A unique architecture with historical character that meets the current and future needs of travelers.

CLIENT
City of Trois-Rivières

TEAM
Patriarche (Architecture, interior design, and signage)

KEYPOINTS
Heritage building.
Aeronautics.
Wood construction.
Advanced security.

ENVIRONMENTAL PERFORMANCE
Target Certification: LEED

This project, combining heritage preservation and modernity, aims to expand and renovate the existing terminal, preserving its unique architecture and historical character while meeting the current and future needs of travelers.

We are carefully preserving the heritage building, transforming it into a welcoming waiting area and a versatile space for events. At the same time, a contemporary extension will be harmoniously integrated, connected to the original structure by a glass walkway. This new section will house a range of modernized airport services, including airline check-in counters, advanced security systems, a dining area, baggage claim facilities, and functional administrative spaces.

With a strong focus on sustainability, the extension will feature a timber structure, in line with Trois-Rivières' environmental standards. We are also committed to obtaining LEED certification, demonstrating our dedication to environmentally responsible construction practices.
